

IMAGE CAPTURING APPARATUS WITH A LASER-FRAMING VIEWFINDER

Abstract

An image capturing apparatus with a laser-framing viewfinder includes a housing, a laser source installed inside the housing for generating a laser beam, a first lens installed inside the housing for diverging the laser beam, a framing mask for masking the laser beam diverged by the first lens to form a laser-framing viewfinder, and a camera lens installed in the housing for capturing an object in the laser-framing viewfinder.
